Loop, there it is...

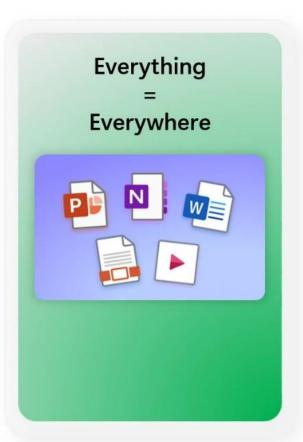

Loop, there it is...

Loop, there it is...

The Challenge

What is Loop?

Microsoft Loop is the idea of combining a powerful and flexible workspace (canvas) with components that can be moved freely in the M365 context and remain synchronized across Microsoft 365 apps.

What is Loop?

Loop, where it is?

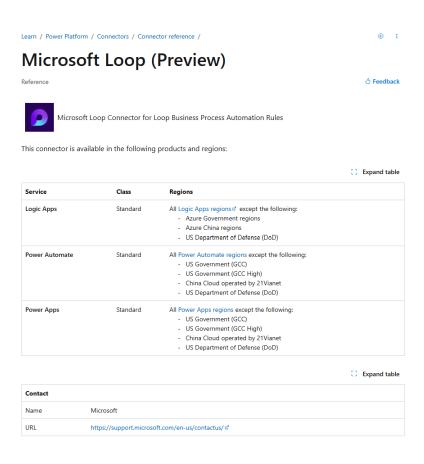

- Where does Loop live?
- Microsoft Loop is built on top of SharePoint, OneDrive, and SharePoint Embedded in Microsoft 365 - backed by .loop files (previously .fluid), which means that most of these capabilities work, and can be managed, like other files in your ecosystem.

Reference

Category

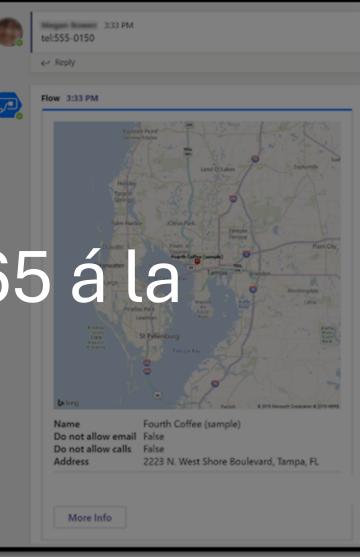

O Design Drawing

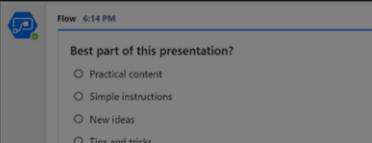

Specifications

O Equipment

O Permits

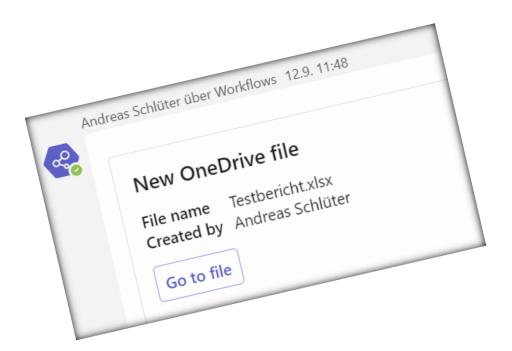

- Universal card exchange format
- Platform and tool independent
- Structure and content -> like HTML / CSS
- Rendering by target application
- currently in Teams and Outlook, Viva Connections
- Adaptive Cards are semi-live Changeable via update (once)

For providing Information

Andreas Schlüter über Workflows 2.6. 08:00

Dein Austritt aus dem Unternehmen

Hallo Alexander, Dein Austritt bei uns im Unternehmen steht in nächster Zeit an, konkret ist Dein Austrittstermin:

2023-06-30

Dieser Termin muss nicht zwingend Dein letzter Arbeitstag sein, dieser kann aufgrund von Fehlzeiten, Überstunden, etc. abweichen. Nähere Infos erhältst Du zeitnah.

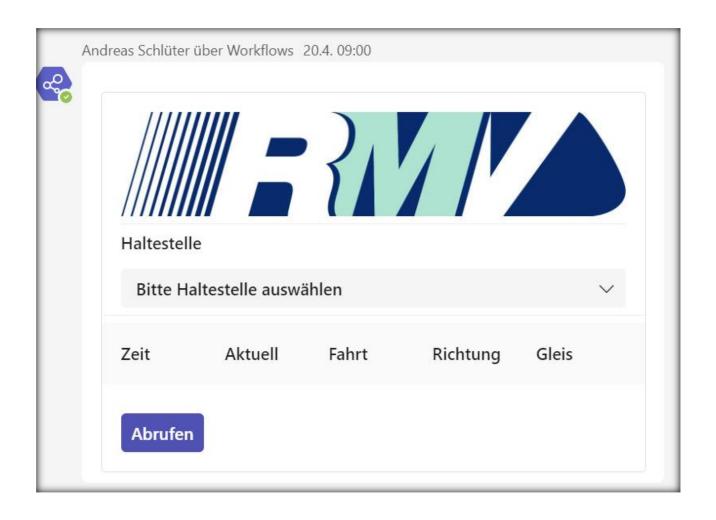

Folgende Arbeitsplatzausstattung sollte sich noch in Deinem Besitz befinden, welche Du bitte an Deinem letzten Arbeitstag persönlich abgibst:

Arbeitsgerät Surface Laptop Studio

Mobilgerät iPhone 14 Pro

Bitte sichere - sofern vorhanden - Deine private Daten im Vorwege der Abgabe.

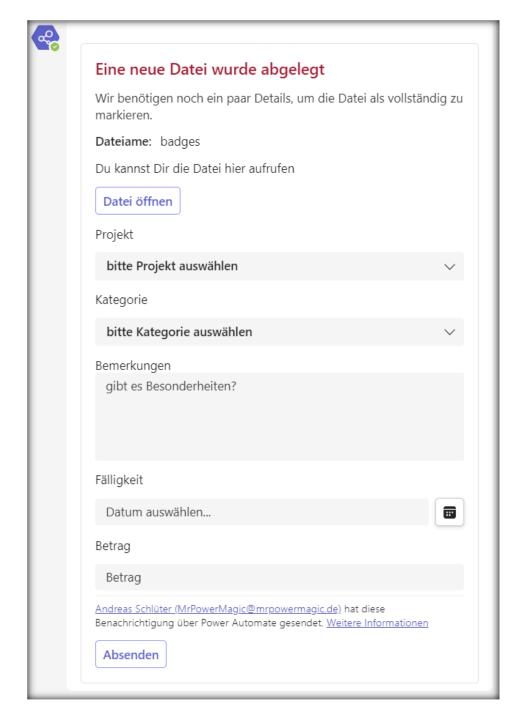

Integrate Information from external sources

Request information in a structured way...

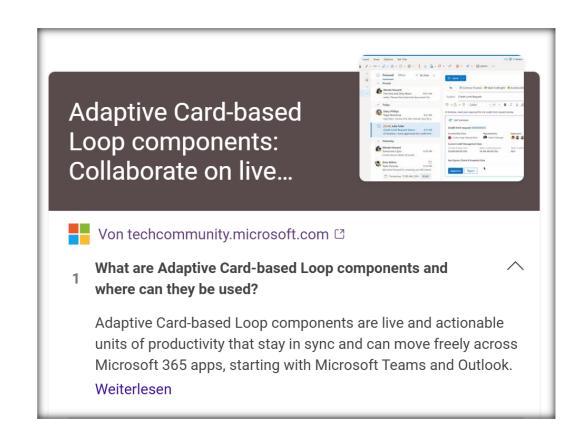

Limitations of Adaptive Cards

- Always needs an external trigger (e.g. Power Automate Trigger)
- Cannot be initiated on its own
- Currently limited to Teams & Outlook

Adaptive Cards meets Loop

- Adaptive Cards as the Basis for Custom Loop Components
- Create your own Loop Components
- Can be used within the M365 stack
- Follow the Loop Components
- Principles

Requirements for actionable card based loop components...

- Own web application / app
- Existing API
- Custom Teams app (Message Extension)

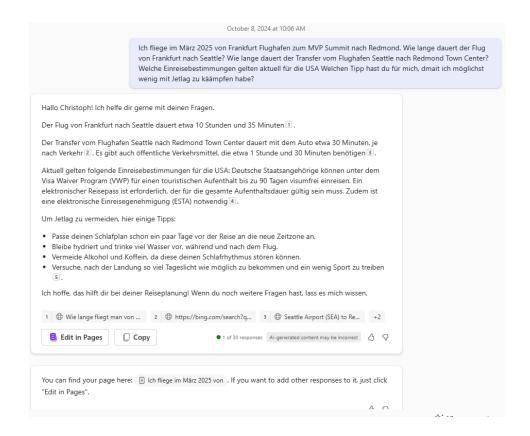

Copilot Pages – Quick Look

- In addition to the references, Copilot also offers a link to the Copilot Page in BizChat
- !! Good 2 Know
 - Copilot names the loop page after the first words in the initial prompt
 - The first click on "Edit in Pages" opens the Copilot Page with a slight delay (in SharePoint Embedded, the user container for the Copilot Pages must first be initiated)
